

Background

Legambiente, a prominent Italian NGO committed to environmental causes, approached Global Voices seeking language expertise for their ambitious project. They needed two interpreters for an in-person and online event. This event, dedicated to disseminating information on methane emissions and its recording, was designed to be a platform for sharing critical data and findings with a broader European community. The translated content would be pivotal in ensuring transparency in scientific data and encouraging collaboration among experts in different regions. The translated content played a crucial role in making Legambiente's data and findings accessible to a wider range of experts.

Challenge

Event faced severe sound issues on the day of the presentation.

Required quick thinking and professionalism on the interpreter's part.

Benefits

- The translated content played a crucial role in making Legambiente's data and findings accessible to a wider range of experts. By facilitating cross-border collaboration, we contributed to the transparency of scientific data, enabling a more comprehensive understanding of the challenges posed by methane emissions.
- We collaborated with Legambiente to make the translated content available to the public via YouTube, bringing the vital information to the public sphere. This not only ensured compliance with transparency standards but also facilitated a broader public discourse on environmental issues.
- Benefit to the client by achieving compliance goals and expanding its reach.
